Summary

Computer Science undergraduate (B.Tech, 2027) focused on full-stack software engineering and backend development. Built full-stack applications using Next.js, Node.js, Express.js, PostgreSQL, and REST APIs, while applying machine learning to real-world problems, including two published research papers. Seeking a Software Development Engineer role to build scalable, reliable systems.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL
Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Computer Networks, System Design
Web & Backend: React.js, Next.js, Node.js, Express.js, REST APIs, HTML, CSS
Databases & Tools: MySQL, PostgreSQL, Git, GitHub, VS Code, Tableau
Machine Learning: Scikit-learn, Pandas, NumPy, Data Visualization

Experience

Full Stack Web Developer Intern Feb 2025 – Aug 2025
Engineers World Private Limited *Remote*

- Built and shipped end-to-end web application features, owning the full lifecycle from frontend UI development through backend API integration and deployment.
- Collaborated with a remote engineering team to deliver functional, production-ready modules on schedule.

Machine Learning Intern June 2025 – July 2025
Centre for Health Innovation (CHI), Manav Rachna International Institute of Research and Studies *Faridabad, India*

- Designed and trained a U-Net deep learning model for medical tumor segmentation, enhanced with MedSAM integration to improve segmentation accuracy.
- Preprocessed and cleaned medical imaging datasets, then evaluated model performance using Dice score and accuracy metrics.

Education

Manav Rachna International Institute of Research and Studies, Faridabad 2023 – 2027
Bachelor of Technology in Computer Science and Engineering *CGPA: 7.18*
Gotlam Gayatri Junior College, Vizianagaram 2021 – 2023
Board of Intermediate Education, Andhra Pradesh *Percentage: 95.3%*
Zilla Parishad High School (EM), Maradam, Vizianagaram 2020 – 2021
Board of Secondary Education, Andhra Pradesh *Percentage: 100%*

Projects

SpendWise – AI-Powered Expense Tracker & Budget management system GitHub

- built an AI-powered full-stack finance platform for 100+ test users with secure authentication, expense tracking, budgeting, and analytics using Next.js, Node.js, Express.js, and PostgreSQL, reducing manual reporting time by up to 95%.
- Implemented automated PDF reports and an AI assistant through REST APIs.

ShopSphere – Full-Stack E-Commerce Platform GitHub

- Developing a secure e-commerce platform covering product management, authentication, shopping cart, order processing, and an AI-powered chatbot for user queries using REST APIs and PostgreSQL.
- Prioritized secure API design and safe handling of user data across all transaction flows.

AI-Based Mental Health Assessment System

- Built an NLP-based text classification model with scikit-learn to assess mental health risk indicators, achieving 80% accuracy on test data.
- Deployed the model behind a Flask web interface to serve real-time predictions.

AI-Powered Tomato Leaf Disease Detection System

- Developing a two-stage CNN system for tomato leaf and disease detection using 40K+ images, with 99.11% accuracy achieved on 2,914 test images.
- Integrating an AI assistant with multilingual voice support to help farmers understand detected diseases, causes, and prevention without login or registration.

Achievements & Certifications

- Published 2 research papers on AI-Based Mental Health Assessment and Medical Image Segmentation using U-Net & MedSAM.
- AI/ML Internship – YBI Foundation: hands-on experience in ML model development, preprocessing, training, testing, and deployment.
- TCS iON Career Edge – Young Professional (TCS), Feb 2026: Professional Communication, IT Foundation Skills, and Introduction to Artificial Intelligence.
